

Propyzamide products from Interfarm now Approved

Flomide and Engage have now received Approval from PSD. With propyzamide being re-registered, Flomide and Engage have just received new MAPP numbers from PSD.

Summary

Interfarm's propyzamide products, Flomide and Engage, have been re-registered and approved. Rates and timings for oilseed rape and winter beans remain unchanged.

Flomide is a 400g/L suspension concentrate of propyzamide (MAPP 14223). It is approved for use on winter oilseed rape, winter field beans, apple, blackcurrant, blackberry, gooseberry, loganberry, pear, plum, raspberry, redcurrant, strawberry, lettuce, lucerne, rhubarb, amenity vegetation, farm forestry, forest nursery, hedgerows, and seed crops of fodder rape, kale, red clover, turnip, white clover, and sugar beet.

Engage is a 50% wettable powder of propyzamide (MAPP14233). It is approved for use on winter oilseed rape, winter field beans, apple, blackcurrant, blackberry, gooseberry, loganberry, pear, plum, raspberry, redcurrant, strawberry, lettuce, lucerne, rhubarb, amenity vegetation, farm forestry, forest nursery, hedgerows, and seed crops of fodder rape, kale, red clover, turnip, white clover and sugar beet.

Whilst there have been some relatively minor changes in the labels and label layout, the rates of use remain the same. This is particularly important for oilseed rape growers who are trying to combat black-grass, where propyzamide remains one of the few remaining products for use in oilseed rape still active on any strain of this difficult grass-weed. Please note that on the labels, the higher rate for oilseed rape of 2.1L/ha (Flomide) and 1.7kg/ha (Engage) are not in the rates table but in the footnotes under the rates tables.

Product	Crop	Rate	Timing
Flomide	Oilseed rape	2.1L/ha	From 1 st Oct when crop is at or after 3 true leaf stage to end of Jan
Flomide	Winter beans	2.1L/ha	From 1 st Oct when crop is pre-emergence, within 7 days of drilling.
Engage	Oilseed rape	1.7kg/ha	From 1 st Oct when crop is at or after 3 true leaf stage to end of Jan
Engage	Winter beans	1.7kg/ha	From 1 st Oct when crop is pre-emergence, within 7 days of drilling.
