

Multi-site Disease Control with nutritional benefits for Winter Wheat

Summary

Guru is an ideal multi-site treatment at T1 in wheat for this year's diseases.

This year, the foliar disease risks are not just Septoria, but also yellow rust and in some cases, mildew. (ADAS Crop Notes 22nd April 2010)

Your choice of T1 multi-site protection is important.

The T1 timing fungicide treatment in wheat needs to deliver effective broad-spectrum disease protection *and* also a multi-site mode of action to manage the question of resistance management.

Guru does just that.

Containing 286g/L chlorothalonil *and* 194g/L mancozeb (*the world's best-selling multi-site fungicide*) in a flowable formulation, **Guru** delivers excellent protection not just against Septoria but also mildew, yellow and brown rust.

- **Guru** is a significantly better choice of multi-site chemistry than just chlorothalonil alone.
- Against Septoria, 1L/ha **Guru** is equivalent to 1L/ha chlorothalonil.
- **Guru** also helps protect against rusts and mildew, unlike chlorothalonil alone.

Guru also provides nutritional benefits.

Crops this spring have had a tough winter and in many cases are now drought stressed at a critical time when the ears are trying to maintain grain sites. Additional manganese in the foliar fungicide programme can be a big plus. At 1L/ha Guru delivers around 40g/ha of foliar applied nutritionally available manganese, making leaves **greener**, leading to improved photosynthesis (mancozeb contains 20% w/w manganese and 0.2% zinc).

Flexible – Guru can be used throughout the programme from T0 to T3.

- A standard dose of 1L/ha can be used repeatedly throughout the programme up to before grain watery ripe stage (GS71). The maximum total crop dose is 5L/ha.
- Tank Mixing – **Guru** can be mixed with a wide range of other relevant products.

Multi-site – Guru contains chlorothalonil *and* mancozeb, delivering a “double” multi-site protection system, with no resistance concerns.

- Rated in the HGCA's wheat disease management guide as suitable for resistance management, Guru continues to provide consistent multi-site protection.
- Highly suitable for wheat growers in the battle against Septoria.
